

BRAVECTO - Serious side effects

The personal story of "Teddie"

(013)

Ronja Sjöberg (Mjällby, Sweden)

This is my dog Teddie. he was just four years old when he died. he got bravecto on Thursday evening. The morning after he was a bit dull, no wonder I thought because it was hot out and he has a lot of fur.

On Saturday he was still dull and his tail was just hanging. But he ate and drank as usual. so I figured that if he was not better on Monday we would go to the vet. but on Sunday morning he was so sick and wobbled when he walked.

So we went to the animal hospital. When we got there he did not even stand. They took blood samples from him and put him in. He received antibiotics and intravenous fluids. He became a little more alert again and we thought he would make it.

But then he had a seizure, and within seconds he was dead .. my beloved dog. Blood samples showed no sign off any poisoning or disease. The vet did not know what killed him. He was completely healthy before he got bravecto.

Another woman in Sweden has been in touch with me and her dog also got bravecto. He also died, and had the same disease course as my dog. He also had a seizure and died in 15 seconds. I forgot to mention that he drooled a LOT!!

I hate myself for trusting my vet and give that pesticide to my dog This was the third year he got it. It hurts so much to be without him. And I hate myself for giving him bravecto

I am sorry for my bad english, I hope you understand. Together we can make them stop selling this pesticide to our dogs!
